

# inovel SmartSpray

*spray simply smarter*

- Efficiency and reproducibility in plant protection
- Simple and intuitive operation
- Expandable and highly customizable
- Savings through precise control of the spread rate

SmartSpray is a modular solution that combines high efficiency with ergonomic operation and flexible adaptation.

A compact and rugged control unit provides the platform for all actuators and sensors ensuring the correct dosage of the chemical spray.

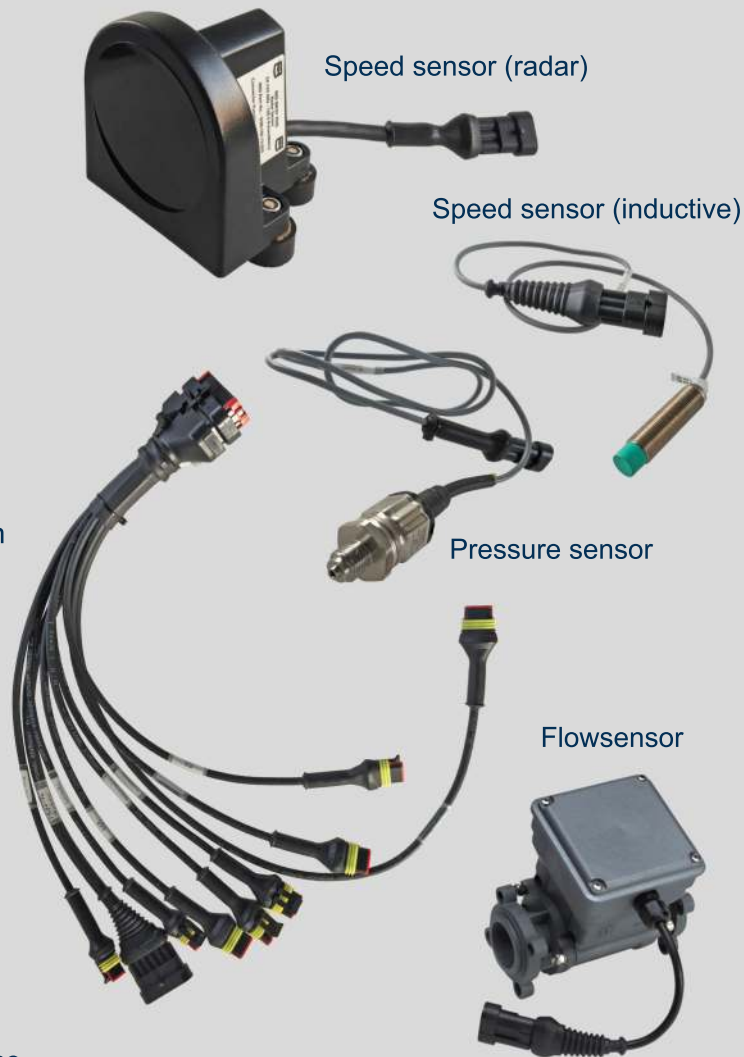

# inovel SmartSpray

spray simply smarter

The ergonomical handling of the **SmartSpray** and display of all important application data, is performed by an input device with integrated TFT display, rotary encoder and soft keys.

Modular structure, flexible integration of hardware and software as well as the expandability and adaptability - **SmartSpray** represents an intelligent system with high and durable utility.

- Rugged components suitable for mobile use
- Freely configurable to meet your specific application (eg 2 to 14 sections are possible)
- Intelligent control sequences ensure lowest power consumption, maximum reliability and long life of the system
- Various options such as speed-, flow- and level-sensors are easy to retrofit
- Additional functions can be optimally integrated through modular hardware and software
- **SmartSpray** and **SmartAir** (air volume flow control) can be operated from one single input device
- Data export allows business reporting, storage and management of spray-programs and application-data (will be available soon)

Since 2006 inovel has been developing and manufacturing innovative products in the field of electronic control systems and interface technology.

Benefit from our expertise on innovative and user-friendly operating solutions - especially in the domain of agricultural technology.
